

What in the World is Biochar?

BIOCHAR is an easy-to-produce ingredient in a new Carbon-Negative strategy that offers solutions to critical ecological, energy and economic challenges:

- sequester carbon in soil to reverse global warming
- increase soil fertility and agricultural yields
- improve soil structure, aeration & water penetration
- reduce use of synthetic fertilizers & pesticides
- reduce nitrous oxide & methane emission from soil
- convert green & brown waste into valuable resources
- an innovative way of building community by focusing on the earth, our food supply & each other

JOIN US TO LEARN MORE ABOUT USING BIOCHAR
IN YOUR OWN GARDEN OR ON YOUR FARM
